

Intersurgical Alterna™

Reusable Latex Free Anatomical Face Masks

Reusable **Latex Free** Anatomical Face Masks

Introduction

The new reusable latex free Anatomical Masks are the latest addition to the Intersurgical Alterna™ range of Anaesthetic Face Masks, Reservoir Bags, Connectors, Breathing Systems and accessories.

Interest in reusables is increasing, and Intersurgical are committed to providing a high quality reusable alternative to our customers. With awareness of environmental issues ever increasing, and legislation in this area at both a European and International level expanding, we are determined to ensure we can offer products which meet those challenges.

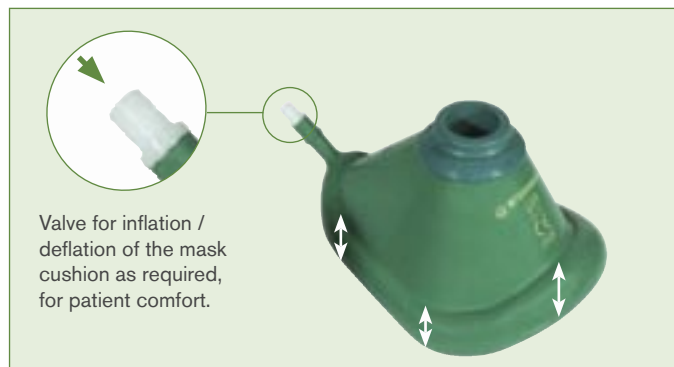

Our new green coloured Anatomical Face Masks provide a latex free solution for those requiring reliable, high performing, synthetic products in the area of anaesthetic consumables. The Face Masks are manufactured from neoprene (polychloroprene), a synthetic material with similar attributes to natural rubber (NRL), but without the associated danger of Type 1 (protein) allergies.

Latex Free Anatomical Face Masks

The masks are green in colour, providing easy identification as a latex free product. They are autoclavable up to temperatures of 134-137°C, have an anatomical shape and an inflatable cuff.

All the masks incorporate a special valve to allow easy, controlled cuff inflation and deflation as required.

Inflatable Cuff

The mask collar provides a standard 22mm fitting and has a rebate to accept a metallic hook ring.

Mask Collar

The mask collar provides a standard 22mm fitting and has a rebate to accept a metallic hook ring.

Features	Benefits
Latex Free	Ideal for use where latex sensitivity may be an issue
Anatomical shape	Proven design
Standard 22mm connection	Ease of use and attachment to any 22mm connector
Full range of sizes 0-6	Can be used with infants, children and adults
Green colour	Easy identification
Autoclavable	Ease of reprocessing
